

Café Scientifique

The Brain, the Broken Brain & the Neural Biology of Language

**Presenter:
Steven Small**

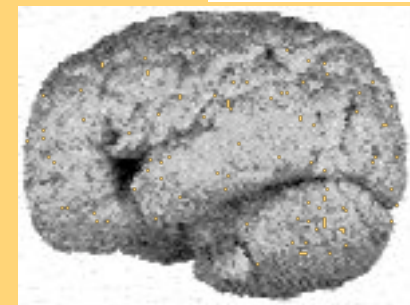

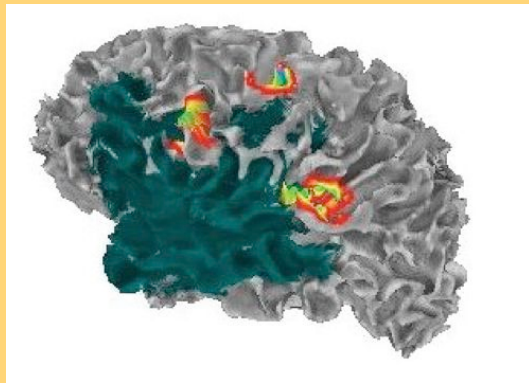

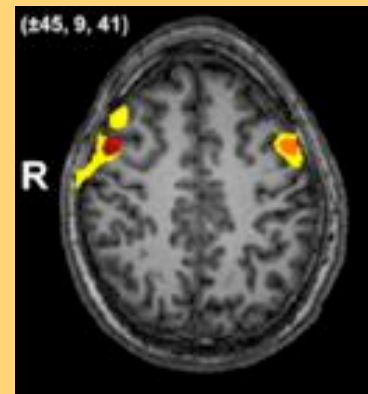

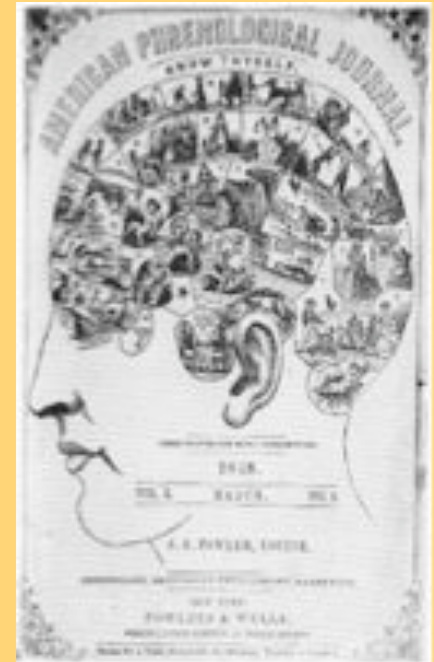

**Time & Date:
7-9 PM
MONDAY**

December 22, 2008

(Limited to first 50 Attendees)

Location: The Map Room
(www.maproom.com) 1949 N. Hoyne

Location: The Map Room
1949 N. Hoyne
(Limited to first 50 Attendees)

My Laboratory focuses on understanding how the human brain produces and comprehends language, and how the motor functions of the hands and mouth achieve goal-directed actions, such as speech and gesture. By investigating the neural bases of language and hand motor function using a variety of methods, such as computational modeling, functional and structural brain imaging, and cognitive assessment, we have been able to understand better the biology of language and to develop novel treatment approaches for language disorders.

Volunteer to be a research subject at <http://www.stroketherapy.net/>
